TECHNICAL SKILLS

- Languages**
Natural, COBOL, JCL, REXX
- Databases**
Adabas, DB2, VSAM
- Mainframe Tools**
CICS, ISPF, SPUFI, QMF, File-AID, Xpediter
- Utilities**
DFSORT, SYNCSORT, Abend-Aid
- Middleware & Scheduling**
IBM MQ, Control-M, TOM, DFSMs
- DevOps & Platforms**
Endevor, JIRA, ServiceNow, Linux, Windows

EDUCATION

Bachelor of Engineering (B.E.)
Electronics and Communication
(EC)
University BDT College of
Engineering (UBDT)
Davangere | Graduated: 2021

DETAILS

Total Experience: 4+ Years

PROFESSIONAL PROFILE

Results-driven Senior Mainframe Developer with 4+ years of comprehensive expertise in Natural/Adabas architecture, enterprise batch processing, and 24/7 production support for global financial operations. Proven track record of resolving critical high-severity incidents, architecting efficient JCL workflows, and guaranteeing 99.9% availability for mission-critical trading and ledger systems. Adept at driving cross-functional collaboration, performing rigorous root cause analysis, and implementing proactive system stabilization strategies to ensure operational excellence, strict SLA compliance, and measurable business impact.

PROFESSIONAL EXPERIENCE

- Senior Mainframe Developer

Morgan Stanley

2021 – Present
- Resolved 30+ concurrent production abends during critical batch cycles, ensuring zero downtime for global banking operations.
 - Executed comprehensive Root Cause Analysis (RCA) and deployed permanent code fixes, significantly reducing recurring production incidents.
 - Engineered and enhanced complex Natural programs to seamlessly support evolving financial business logic and operational requirements.
 - Designed, modified, and optimized JCL workflows, accelerating batch execution and improving overall enterprise reliability.
 - Managed high-volume financial transaction data using Adabas databases and VSAM files, guaranteeing strict data integrity and security compliance.
 - Streamlined end-to-end release management, conducting rigorous deployment validation and deep-dive impact analysis across environments.
 - Boosted batch processing efficiency and data manipulation speeds by leveraging DFSORT and SYNCSORT utilities for massive datasets.
 - Collaborated effectively with cross-functional global teams and business stakeholders during major production releases and critical incident triage.
 - Ensured rock-solid stability of mission-critical trading applications while strictly maintaining 100% adherence to Service Level Agreements (SLAs).
 - Mentored junior engineers and led comprehensive knowledge transition workshops to establish best practices in Mainframe operations.

KEY COMPETENCIES

High-Severity Incident Management • Batch Cycle Optimization • Root Cause Analysis (RCA) • Cross-Functional Collaboration • End-to-End Release Management • SLA Adherence • Technical Debt Reduction • Legacy System Stabilization

AWARDS & RECOGNITION

Client Excellence Awards
Honored with 4 'On-the-Spot' Client Awards from Morgan Stanley for exceptional ownership, rapid incident response, and continuous production stabilization.
